Mann-Whitney U Test

An extension of sum of the ranks test. This is one of the most important & powerful non parametric test of significance. At the same time it is an useful alternative of parametric T-Test. When an investigator wants to test the significance of difference bet. two independent samples drawn from same population or drawn from two indep. population & he has doubts about the normality of the distribution. Mann-Whitney U test is one of the imp. alternatives that he can have from the statistics. The power efficiency of Mann W. U. test is 95.5%. It can be used with groups having diff. numbers or diff. size. $N =$ total no. But this test has its own limitation. It should not be used with such distributions that have frequent ties. The steps of Mann Whitney U. tests are -

- 1) Scores of the both groups are jointly ranked.
- 2) Sum of the

based on the statistic U .
 In a small sample U is
 expressed by the nos. of scores
 in the group levelled as precedes
 the no. of scores in n_1 . The
 group having smaller no. is
 assigned as n_1 + the group having
 larger no. is assigned as n_2 .

$U_1 = n_1 n_2 - U_1$. where as n_1 is
 the total no. in smaller gr.
 N_2 total no. in larger group +

$U_1 = \text{Sum total of ranks in}$
 n_1 group. In larger sample

when there is no tie in distri.
 $U = n_1 n_2 + \frac{n_1 (n_1 + 1)}{2} - R_1$ or

$$n_1 n_2 + \frac{n_2 (n_2 + 1)}{2} - R_2$$

Find out the Z value for u .

$$\text{This } Z = \frac{2U_1 - n_1(N+1)}{\sqrt{\frac{n_1 n_2 (N+1)}{3}}}$$

Sum of the Tie i.e. $\Sigma T = t^3 - t$

If there is tie in distri. then we
 use this formula:-

$$Z = \frac{2U_1 - n_1(N+1)}{\sqrt{\frac{n_1 n_2}{N(N-1)} \left(\frac{N^3 - N}{3} - \Sigma T \right)}}$$

gr. 10 Scores	gr. 9	R1	R2
78x	110x	7	9
64x	70x	4	5
75	53x	6	3
45x	51x	1	2
82x		8	

$$u = 26 \quad 19u$$

$$u = z = 26 - 19$$

$$z = \frac{2 \times 19 - 4(9+1)}{\sqrt{3}}$$

$$\sqrt{4 \times 5(9+1)}$$

$$\frac{38 - 40}{\sqrt{\frac{200}{3}}} = \frac{-2}{8.1}$$

$$= -0.246$$

Rating

$$2^3 - 2 + 5^3 - 5 + 4^3 - 4 + 7^3 - 7 + 2^3 - 2 + 6^3 - 6 + 4^3 - 4 + 3^3 - 3 + 3^3 - 3$$

$$6 + 120 + 60 + 306 + 6 + 20 + 60 + 24 + 24 = 846$$

Perception

- 1) Method of Reproduction
- 2) Method of Comparison
- 3) Method of Estimation

Prob. 1) Conduct an exp. to demonstrate the extent & direction of error in perception of temporal interval.

2) Conduct an exp. to make a comparative study of short time interval + long time interval.

3) Conduct an exp. to make a comparative study of perception of ~~filled~~ filled time interval + unfilled time interval.

4) Conduct an exp. to make a comparative study of time interval engaged in pleasant task + monotonous task.

I Design:-

(method of Repro.)

std. time	method	No. of trials
5 or 7 sec.	method of Repro	30 or 40

No. of trials	Start time	Reprinted time
1	7 Sec.	5 Sec.
2	7 Sec.	9 Sec.
